

Sir(s); I am writing in comment of the proposal by Mr. N. Leggett to require that Ham Radio equipment manufacturers "build in" "field repairability" on their equipment..I believe this proposal to be ill-informed, and virtually non-enforceable..If Mr Leggettt requires more experience in technical matters, he should be building some equipment rather than requiring others to "modify" theirs, to be more to his liking..Further, since this will inevitably raise equipment prices, (which I believe to be high enough) it should be rejected on this basis alone.. If more easily "repairable" equipment were an actual necessity, there would be no need for the technical expertise now required to repair them, let alone more (expertise)..Thank you,
J.W. White K1EXE
